A Parent's Guide

Simple, safe ways to bring an AI study tool into your child's routine at home.

START HERE

What is PromptPaddi Junior?

PromptPaddi Junior is an AI study tool built for Nigerian school learners, from Lower Primary right through to WAEC-level Senior Secondary. Instead of an open-ended chatbot, it gives your child ready-made prompts written around real topics from their actual curriculum. Your child copies a prompt into a free AI such as Claude, ChatGPT or Gemini, which then tutors them step by step instead of just handing over an answer.

Before your child ever studies with it, a short AI Literacy Course teaches them what AI is, how it can be wrong, and how to stay safe, so you're not the only one keeping an eye on things.

Getting started

- Every subject has three free prompts you can try with no code and no sign-up at all.
- Try the demo code **PPJ-DEMO-0001** at promptpaddijunior.com/unlock to preview the first lesson of the AI Literacy Course.
- Study Coach unlocks the whole prompt library and the course: see promptpaddijunior.com/study, or ask your child's school if they already have it.

12 ways to use it at home

1 The pre-teach primer

Ask your child's teacher (or check the school's own plan) what's coming up next, and share that topic's prompt a day or two beforehand: a gentle way to arrive at the lesson already curious.

2 Homework support, not homework-doing

Because each prompt asks the AI to guide step by step instead of giving the answer outright, you can sit with your child while they work through a prompt without needing to know the subject yourself.

3 Purposeful screen time

When your child wants to use AI anyway, a curriculum-aligned prompt is a more productive place for that time to go than an open-ended chatbot conversation.

4 A weekend or holiday revision habit

A light, low-pressure way to keep skills fresh between terms. Ten minutes on one prompt is enough to stop a topic going cold.

5 Family AI literacy, together

Work through the "AI and Me" course lessons as a shared activity. The safety lessons (like "My AI Promise") make a natural, low-stakes way to talk about safe AI use as a family.

6 Catching up after time off

If illness or travel means missed school days, use the relevant topic prompts to keep your child roughly on pace before they return to class.

7 Understanding what your child is learning

Browsing the subject and topic list by school stage is a quick way to see what the Nigerian curriculum actually covers at each level, even if you didn't study it yourself.

8 One household, several stages

With children at different school stages, each can browse their own Lower Primary, Upper Primary, JSS or Senior Secondary section: useful for coordinating study time across siblings without mixing up who's on what.

9 WAEC season revision

For a child in Senior Secondary, the WAEC-aligned subject prompts make a focused way to revise topic by topic in the run-up to exams.

10 A calmer start or end to the school day

A single prompt as part of a morning or evening routine (reviewing yesterday's topic, or previewing tomorrow's) without it becoming a big production.

11 Supervising, not just permitting

Sit in occasionally, or review a conversation together afterwards. It's a good moment to ask what your child asked, and what the AI got right or wrong.

12 A steady spine for extra tuition or homeschooling

If you're supplementing school (or homeschooling), use the subject and topic list term by term as a structured starting point, rather than searching for material topic by topic.

Keeping it safe

- PromptPaddi Junior is meant to be used with a parent or guardian's knowledge and supervision: it's a study aid, not a babysitter.
- Like any AI, the tutor can sound confident while being wrong. Encourage your child to check important answers with a teacher or a trusted adult, especially for exams.
- We never sell personal data. Prompts are used in your child's own AI account, so we never see those conversations. Paddi, our built-in AI tutor, is never sent your child's name, school or email, and we do not keep those conversations.
- If anything in a conversation feels wrong, email **hello@promptpaddijunior.com** straight away. Safeguarding and data concerns get a priority response.

Quick questions

Do I need to know the subject myself? No. The AI does the explaining. Your role is mostly to supervise and occasionally check in, not to teach the content yourself.

Do we need to pay for an AI as well? No. The prompts go into the free Claude, ChatGPT or Gemini account your household already has. There is no quota to top up.

Is this the same as just using ChatGPT? Not quite. The prompts are already written around your child's actual curriculum, and the safety teaching (the AI Literacy Course) comes built in, rather than being left up to you to cover on your own.

Paddi Radar: what the report really says

Photograph your child's school report, or a page of classwork or homework, at promptpaddijunior.com/radar. Paddi shows you in plain words where they're strong, where they need help, and every mistake explained. Your first scan is free, with no sign-up; then £3,000 a child, a term, for 12 scans. Add each scan to your child's Paddi Dash to see their progress, subject by subject, from term to term. The photo is never kept.

Your free Paddi Dash

One free dashboard for everything your child learns, with their progress in plain words: no card, two minutes at promptpaddijunior.com. Every part, step by step, is in the Paddi Dash Guide: promptpaddijunior.com/paddi-dash-guide.pdf.
