A Teacher's Guide

Ingenious ways to bring an AI study tool into your classroom: before, during, and after every lesson.

START HERE

What is PromptPaddi Junior?

PromptPaddi Junior is an AI study tool for Nigerian learners, from Lower Primary right through to WAEC-level Senior Secondary. Every subject has ready-written, curriculum-aligned prompts, written around real NERDC and WAEC topics, not generic questions. Pasted into a free AI such as Claude, ChatGPT or Gemini, each one starts a real, step-by-step tutoring session. A guided AI Literacy Course teaches learners to use AI safely and honestly before they rely on it for study.

For a teacher, that means you don't have to write your own AI prompts from scratch, and you don't have to hope learners use AI responsibly: the safety teaching is already built in.

Getting set up

- Three free prompts in every subject are available with no code at all: a good way to try it before committing.
- A demo access code, **PPJ-DEMO-0001**, at promptpaddijunior.com/unlock, previews Module One of the AI Literacy Course.
- For a whole class or school, Study Coach for your learners comes with one shared school access code that covers every learner (no individual passwords for children to lose), with a simple roster and a snippet you can embed on your school's own website. See promptpaddijunior.com/for-schools.

12 ingenious ways to use it

1 The pre-teach primer

Share a topic's prompt a day or two before you teach it. Learners arrive with a question already half-formed, and you spend less time on "what is this?" and more on the topic itself.

2 A five-minute starter

Project a prompt on the board at the start of the lesson to activate prior knowledge or spark curiosity, before you've said a word about the topic.

3 Consolidation, not just homework

After teaching a topic, set one or two related prompts as practice. Because each prompt asks the AI to guide step by step rather than hand over answers, it reinforces understanding instead of replacing it.

4 A flipped-classroom spine

Assign the relevant AI Literacy Course lesson and a subject prompt as pre-reading, then use class time for discussion, application and questions, not first exposure to the material.

5 Differentiation without extra planning

Point stronger learners to a related, more advanced prompt while the rest of the class revisits the core one: same topic, two depths, no extra worksheets to write.

6 Model good questioning, live

Paste a prompt into an AI in front of the class and run a real tutoring session on the board. Learners learn how to ask a good follow-up question by watching you do it, which pairs naturally with the AI Literacy Course's lessons on how AI actually works.

7 Targeted WAEC and BECE revision

For exam classes, curate a short list of prompts by topic as a revision menu in the run-up to WAEC or BECE. The Senior Secondary content already follows the WAEC syllabus subject by subject.

8 Catch-up for absent learners

A learner who missed a lesson can use that topic's prompt to get up to speed on their own before rejoining the class, rather than falling behind until you can re-teach it.

9 Cross-curricular theme weeks

Pair prompts across subjects (Nigerian History alongside Social and Citizenship Studies, for instance) to build a themed week without writing new material from scratch.

10 A jumping-off point for projects

Use a prompt as the opening research step for project-based or independent work, then have learners take it further in their own direction.

11 A real digital-citizenship unit

Run the AI Literacy Course as a standalone unit before learners ever touch the subject prompts. It covers what AI gets wrong, how to stay safe, and how to use it honestly for schoolwork, in an age-appropriate way for your year group.

12 A quick check against your scheme of work

Browse the subject and topic list for your stage to sanity-check your own term plan against the NERDC or WAEC syllabus: useful when planning a new term or reviewing coverage.

EVERY WEEK

A simple weekly workflow

One way to fold this into a normal teaching week without extra admin:

Before the lesson	During the lesson	After the lesson
Share the topic's free prompt (or a specific one you've unlocked) so learners arrive with a question already forming.	Paste a prompt into an AI on the board and model a real tutoring session: show learners how to ask a good follow-up question.	Set one or two prompts as consolidation (practice, not just reading) to be done before the next lesson.
Check the topic against the WAEC/NERDC-aligned subject list to confirm your scheme of work is covered.	Group learners by pace: stronger learners explore an extension prompt while others revisit the core one.	For absent learners, send the topic's prompt directly so they can catch up before rejoining the class.

Safety and good practice

- PromptPaddi Junior is a study aid, not a source of truth. Like any AI, it can sound confident while being wrong. Encourage learners to check important answers against a textbook or with you.
- Prompts are used in each learner's own AI account, so we never see those conversations. Paddi, our built-in tutor, is never sent a learner's name, school or email.
- As the administrator, you (or your school) are responsible for having appropriate consent in place under your own safeguarding policy before adding a learner to the roster.
- If something in a conversation feels wrong, email hello@promptpaddijunior.com. Safeguarding and data concerns are treated as a priority.

Quick questions

How do I get my class set up? Ask your school to add Study Coach for its learners (it comes with a shared school access code), or start with the free prompts and demo code.

Is it aligned to what I already teach? Yes. Primary and Junior Secondary content follows the Nigerian NERDC curriculum blended with UK National Curriculum elements, and Senior Secondary follows the WAEC syllabus subject by subject.

Can learners use it without an access code? Yes, for the free prompts in each subject. Full access needs Study Coach.
